# FinWell Apps

Team: Nathan Malitz! Zachary Criswell! Adam Gackenheimer!
& Alex Thomas!

People walking around with DIY masks like

Report of usage

Clients - Acutech

Clients initialized struggled with creating the budget because the app rashed (This was a first time ever occurrence, as well as not understanding the buttons pressed actually did something. After their initial confusion that had an ease of navigation

Mentor - Colin!

Our mentor was easily able to understand how our app worked with no hiccups. However he also said the budget creation buttons need to have a reaction when being pressed. (This was not an oversight but rather a lack of time to fix it issue) He also gave plenty us plenty of useful feedback for future iterations

Permissions

What did the client give permission to be used in the Student Symposium?

Team Work (self talk)

Alex Thomas *Neo.* - Worked with Adam on the UI, and documentation

Nathan Malitz *Morpheus.* - Worked on adding back-end tests, and making the code more modular.

Adam Gackenheimer *Mind Bending-Spoon-Boy* - Primallry added UI features and cleaned its presentation

Zachary Criswell *Agent Smith* - Added UI tests and some documentation.

Mentor Feedback - Zachary

- Possibility of sub categories
- Suggested the possibility of graphs going sideways
- Make the add transaction button smaller and move the button to the money instead of the category name
- Get rid of login page (we won't be having username/password)

Client Feedback - Alex

- They would like to see savings goals implemented (still) as well as a debt feature

- They want the helpful resources on the app.

- Need to make clear what belongs in each category for the simple budget. (perhaps change the categories name)
- Make certain buttons have clear response (some buttons didn't look like they did anything after being pressed)

Iteration 5 Features - Zachary

FR8 - MED - BR1, BR3 - Implement saving category
FR35 - Provide users with Financial educational resources
FR33 - Show end of a month budget report
FR5 - include a debt category

In Summary: Our entire app focus has changed dramatically. Will not be using a Server

- Focus on adding quality of life changes in the app

- Make the experience of creating a budget more in the hands of the user rather it being automatically done

Software Demonstration

Hold your applause as Adam pulls up the project.
